

Apex Systems - Supplier Proposal

Executive Summary

Apex Systems proposes a secure enterprise-grade cloud platform designed for large procurement organizations. Our architecture prioritizes scalability, integration resilience, auditability, and security. The solution has been deployed in regulated enterprise environments.

Proposed Solution & Technical Capability

The solution uses a containerized microservices architecture on Kubernetes with independently scalable services. REST APIs and event interfaces integrate with SAP and Oracle ERP. SAML 2.0 and OIDC are supported for SSO. The design includes multi-zone deployment, automated backups, disaster recovery, and horizontal scaling tested above 40,000 supplier users.

Implementation Plan

A 22-week delivery plan is proposed: discovery 3 weeks, architecture/design 3 weeks, configuration 5 weeks, integrations 5 weeks, UAT 3 weeks, training and rollout 3 weeks. The team includes a program manager, solution architect, 5 engineers, security architect, QA lead and change manager. Weekly RAID reviews will manage risk. The schedule is two weeks longer than the requested target.

Commercial Proposal

Cost Item	Amount (INR)	Assumption
Implementation	1,85,00,000	Includes 4 major integrations
Year-1 subscription/support	92,00,000	Up to 25,000 external users
Optional analytics pack	18,00,000	Optional
3-year estimated total	4,05,00,000	Taxes excluded

Security & Compliance

ISO 27001 certified ISMS, SOC 2 Type II report available under NDA, AES-256 encryption at rest and TLS 1.3 in transit. Quarterly vulnerability scans, annual penetration testing, RBAC, immutable audit logs, security incident response with 30-minute P1 acknowledgement and privacy controls are included.

Support, Experience & References

24x7 production support for P1/P2. P1 acknowledgement 15 minutes and target restoration 4 hours. Apex has delivered 18 enterprise procurement/digital workflow programs. References include a multinational manufacturer with 30,000 suppliers and a regulated financial enterprise. Named customer contacts can be provided after buyer approval.

Risks and Assumptions

Higher commercial cost reflects managed security, DR and enterprise support. Delivery assumes buyer decisions within two business days and timely ERP sandbox access.
