

BrightPath Tech - Supplier Proposal

Executive Summary

BrightPath Tech offers a cost-focused supplier portal with a rapid implementation approach. The proposal targets fast go-live and straightforward workflows using a managed cloud stack.

Proposed Solution & Technical Capability

The platform is cloud hosted and exposes REST APIs. Standard connectors are available for common ERP integrations. SSO is supported. The proposal states that the platform can scale for large supplier communities but does not provide load-test results or detailed integration architecture.

Implementation Plan

A 14-week implementation is proposed: discovery 1 week, configuration 4 weeks, integration 4 weeks, UAT 2 weeks, training and go-live 3 weeks. Team: project manager, 3 developers, QA engineer. Weekly status meetings will track issues. Detailed risk ownership and migration rollback plan are not specified.

Commercial Proposal

Cost Item	Amount (INR)	Assumption
Implementation	78,00,000	Standard workflows
Year-1 subscription/support	48,00,000	Up to 20,000 suppliers
Optional integration	6,00,000	Per non-standard connector
3-year estimated total	2,20,00,000	Taxes excluded

Security & Compliance

TLS encryption and role-based permissions are provided. Daily backups are included. ISO 27001 certification is planned and currently not available. SOC 2 is not provided. Penetration testing frequency, privacy retention controls, and formal audit evidence are not specified.

Support, Experience & References

Business-hours support with on-call escalation for critical issues. P1 acknowledgement target is 60 minutes. BrightPath has completed four mid-size supplier portal projects; largest referenced rollout is 3,500 suppliers. Two references can be shared.

Risks and Assumptions

Lowest-cost proposal. Enterprise-scale proof, compliance evidence, and detailed DR commitments are limited.
