

Orbit Digital - Supplier Proposal

Executive Summary

Orbit Digital brings extensive enterprise transformation experience and a mature support organization. The proposed supplier collaboration solution uses Orbit Digital cloud services and has strong references in procurement transformation.

Proposed Solution & Technical Capability

The platform supports workflow, document exchange, SSO and cloud deployment. ERP integration will use the customer integration layer and standard APIs. Detailed API mapping, throughput, error-handling pattern and scalability benchmark are to be finalized during discovery. Multi-zone availability is offered.

Implementation Plan

A 20-week program is proposed with discovery, design, configuration, integration, UAT, training and go-live. A program manager, architect, technical lead, 4 developers and QA team are included. Milestones are listed, but detailed dependency dates and migration rollback steps will be refined after contract award.

Commercial Proposal

Cost Item	Amount (INR)	Assumption
Implementation	1,25,00,000	Standard program scope
Year-1 subscription/support	72,00,000	25,000 suppliers
Data migration	12,00,000	One legacy source
3-year estimated total	3,35,00,000	Taxes excluded

Security & Compliance

ISO 27001 certified operations, encryption, RBAC, audit logging, vulnerability scanning and annual external penetration testing. Privacy controls and incident escalation are documented. SOC 2 is not included in the proposal.

Support, Experience & References

Orbit offers 24x7 critical support and a global service desk. P1 acknowledgement 20 minutes. More than 25 procurement and workflow transformation projects are cited, including two global manufacturers and one logistics enterprise. Five reference case studies with measurable adoption outcomes are summarized.

Risks and Assumptions

Integration design is intentionally deferred to discovery, creating uncertainty around effort and throughput. Pricing assumes use of buyer middleware and one legacy migration source.
